A WORD...

I'm junior front-end developer located in Belgrade, Serbia. So far I had chance to meet with code in WRPM award winning studio. As member of this crew I was working on small parts for big projects such as creating website layouts and user interfaces by using standard HTML/CSS practices. Planning and researching solutions for new projects along with senior developers and web designers to match visual design intent. Through this time, I was also introduced to Bootstrap, JavaScript and jQuery basics as well as the Wireframing and prototyping.
